PROPOSAL

1. The Problem You're Facing

You are sitting on sales data covering 541,900+ order records across 37 countries, but you can't fully trust it or use it. Over 135,000 records lack customer identification, spreadsheets contain cancelled orders and price errors, and numbers don't add up easily. Nobody has time to dig through hundreds of thousands of raw lines to find out what's actually happening, leaving strategy dependent on guesswork instead of evidence

2. What We'll Build for You

- A clean, trustworthy version of your data — all 541,900+ records audited, bad entries separated, and 397,800+ validated sales transactions documented.
- A clear picture of what your data actually shows — insights into revenue drivers, top regions, and repeat purchase habits presented in plain language.
- A live dashboard you and your team can open any time to track spending trends across all 4,330+ buyers and 3,600+ products.
- A short written report with findings and immediate commercial recommendations.

3. The Value This Adds

Instead of…	**You get…**
Guessing which customers matter most	An exact breakdown of your top accounts (where 10% of buyers bring in 61% of sales)
Spending hours reconciling spreadsheets	One clean, organized database covering 8.9M+ in sales you can trust and reuse
Static, outdated reports	A live dashboard tracking regional sales and order patterns as new transactions arrive
Decisions based on opinion	Decisions backed by verified historical customer performance

4. Proof of Work

This is not theoretical. The same process was recently used on a real customer dataset: 541,909 raw transaction records, full of operational noise — 135,080 unlinked customer records, 10,620+ invalid quantity entries, and cancelled order fees.

- **Every single error was found, documented, and fixed:** Standardized the raw records into a structured £8.91M transaction pool.
- **The result:** A fully clean, audit-ready dataset with zero remaining anomalies.
- **Concrete, actionable business insights were produced:** Identified that the top 10% of buyers drive over 61% of overall revenue across 37 international markets.
- **A live dashboard was delivered:** Built for quick executive monitoring of top products and regional demand.

5. Investment

Pricing depends on the size and condition of your data. Example packages:

Package	**What's included**	**Price**
Starter	Data cleaning + one summary report	$ 30
Standard	Data cleaning + analysis + live dashboard	$ 50
Full Service	Everything in Standard + ongoing monthly updates	$ 100 /month

6. Timeline

Week	What happens
Week 1	Receive your sales data, audit order logs, confirm the project plan with you
Week 2	Clean missing customer tags, reconcile prices, and prepare the dataset
Week 3	Run customer segmentation and build the live visual dashboard
Week 4	Deliver the summary report, walk your team through the dashboard, hand over clean files

7. Next Steps

1. Reply to confirm which package fits you best.
2. Share access to your raw transaction data
3. We kick off within 48 hours of confirmation
